## Amendments to the Claims:

The following listing of claims will replace all prior versions, and listings, of claims in the application:

- 1. (Currently Amended) Inflatable brace for stabilizing the ankle, comprising two lateral shells (2, 3) with which are associated, respectively, two bags (12, 13) which are inflatable with air and which are intended to bear, respectively, on the right and left sides of an ankle, said bags (12, 13) being provided with means (17, 18, 19) for their inflation, and means of the strap type (4 to 7) being provided to connect the two shells (2, 3) and permit tightening of the brace (1) around an ankle, characterized in that the means of inflation (17, 18, 19) of the two inflatable bags (12, 13), respectively right and left, are common to these two bags (12, 13).
- 2. (Currently Amended) Ankle brace according to Claim 1, characterized in that the common means of inflation comprise two flexible inflation conduits (17, 18)-which start, respectively, from the upper parts of the two bags (12, 13) and which converge, in a V-shaped configuration, towards a common inflation valve (19) situated between the two bags (12, 13).
- 3. (Currently Amended) Ankle brace according to Claim 2, characterized in that the two flexible conduits (17, 18) and the inflation valve (19) are situated in the front upper part of the brace (1).

- 4. (Currently Amended) Ankle brace according to Claim 2-or 3, characterized in that the walls of the flexible inflation conduits (17, 18) are formed directly by continuations of the two opposite walls (14, 15) of the two inflatable bags (12, 13).
- 5. (Currently Amended) Ankle brace according to any one of Claims 2 to 4claim 2, characterized in that the inflation valve (19) is continued by a tongue (20) forming a loop which can be passed through by one of the straps (4, 5) for tightening the brace (1).
- 6. (Currently Amended) Ankle brace according to any one of Claims 1 to 5claim 1, characterized in that each of the two inflatable bags (12, 13) has, at least in its upper half, a zone comprising points and/or lines of connection (21) between its two opposite walls (14, 15), in such a way as to limit, in this zone, the degree of inflation of each bag-(12, 13).
- 7. (Currently Amended) Ankle brace according to Claim 6, characterized in that said zone is provided with rectilinear and substantially parallel weld seams (21) which connect the two opposite walls (14, 15) of the bag (12, 13).
- 8. (Currently Amended) Ankle brace according to any one of Claims 1 to 7claim 1, characterized in that each inflatable bag (12, 13) comprises, in its lower half and on the inner side, a small auxiliary bag (22) which is open in its upper part and is intended for the introduction of removable cushions (23, 24), in particular of foam or gel.
